**AirWatch**

## Switching zone gas detection

The AirWatch is your ready-to-use solution for the monitoring of various gases. Based on the measurement values and alarms, equipment is switched on or off, data is logged and employees are remotely informed of the gas concentrations present.

### Switching everything on/off

The AirWatch is a non-ATEX detector head with pump, controller, alarm and switch in one device. It can operate switches on a wide variety of equipment in the event of a gas alarm, from generators to breathing air units and power supplies.

With the optional wireless function, you can also remotely monitor several AirWatches. The data is stored on the PC/laptop or on an optional SD card in the device itself, with real-time information giving a clear picture of the different locations.

Many configurations are possible, so the AirWatch can be used very flexibly, either in standalone mode or as part of a complete system.

### Characteristics:

- Functions in standalone mode or as part of a mesh network
- Automatically switches pumps, on/off buttons, ventilation, etc.
- Developed for demanding environments
- Can be used inside and outside
- Flexible and programmable
- Available for O<sub>2</sub>, LEL, H<sub>2</sub>S, CO and SO<sub>2</sub>, other gases on request
- Built-in pump
